Webinar – Open Banking

Topic Outline

“Open Banking gives customers a right to direct that the information they already share with their bank be safely shared with others they trust. It is designed to give customers more control over their information, leading to more choice in their banking and more convenience in managing their money, and resulting in more confidence in the use and value of an asset mostly undiscovered by customers – *their data*.”

Open Banking is part of the Consumer Data Right in Australia, a more general right being created for consumers to control their data, including who can have it and who can use it. Banking is the first sector of the Australian economy to which this right is to be applied and Open Banking is the way that this is to happen. More sectors of the economy are to follow and Open Banking needs to work together with them to form a single, broader framework...” **Source:** *Treasury Review into Open Banking, December 2017.*

This webinar explores the influence and potential impact of Open Banking in Australia on the customer owned banking sector.
